

From know-how to platform

Mission

We guide CEOs and Managers into the digital future with AI solutions that generate real value.

Turning field knowledge into scalable AI solutions

The Starting Point: Consulting

We began by guiding companies through digital transformation, building solid expertise in processes, data, and people

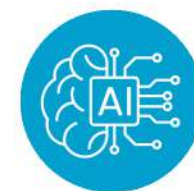

Knowledge: Field Experience

We gained a deep understanding of the real challenges faced by managers and transformed consulting into an innovation laboratory.

Innovation: DataProdigy

In 2021, our first AI product for automated business data analysis was launched.

Scalability: From Product to the AI SaaS Suite

We evolved the model into SaaS products with a unique platform, bringing AI to a global scale.

Why do CEOs struggle to innovate?

Strategic Insights for Organizational Growth

Which processes should we automate first?

What is the return on investment (ROI)?

How can we manage data and security risks?

Does my team possess the required skills?

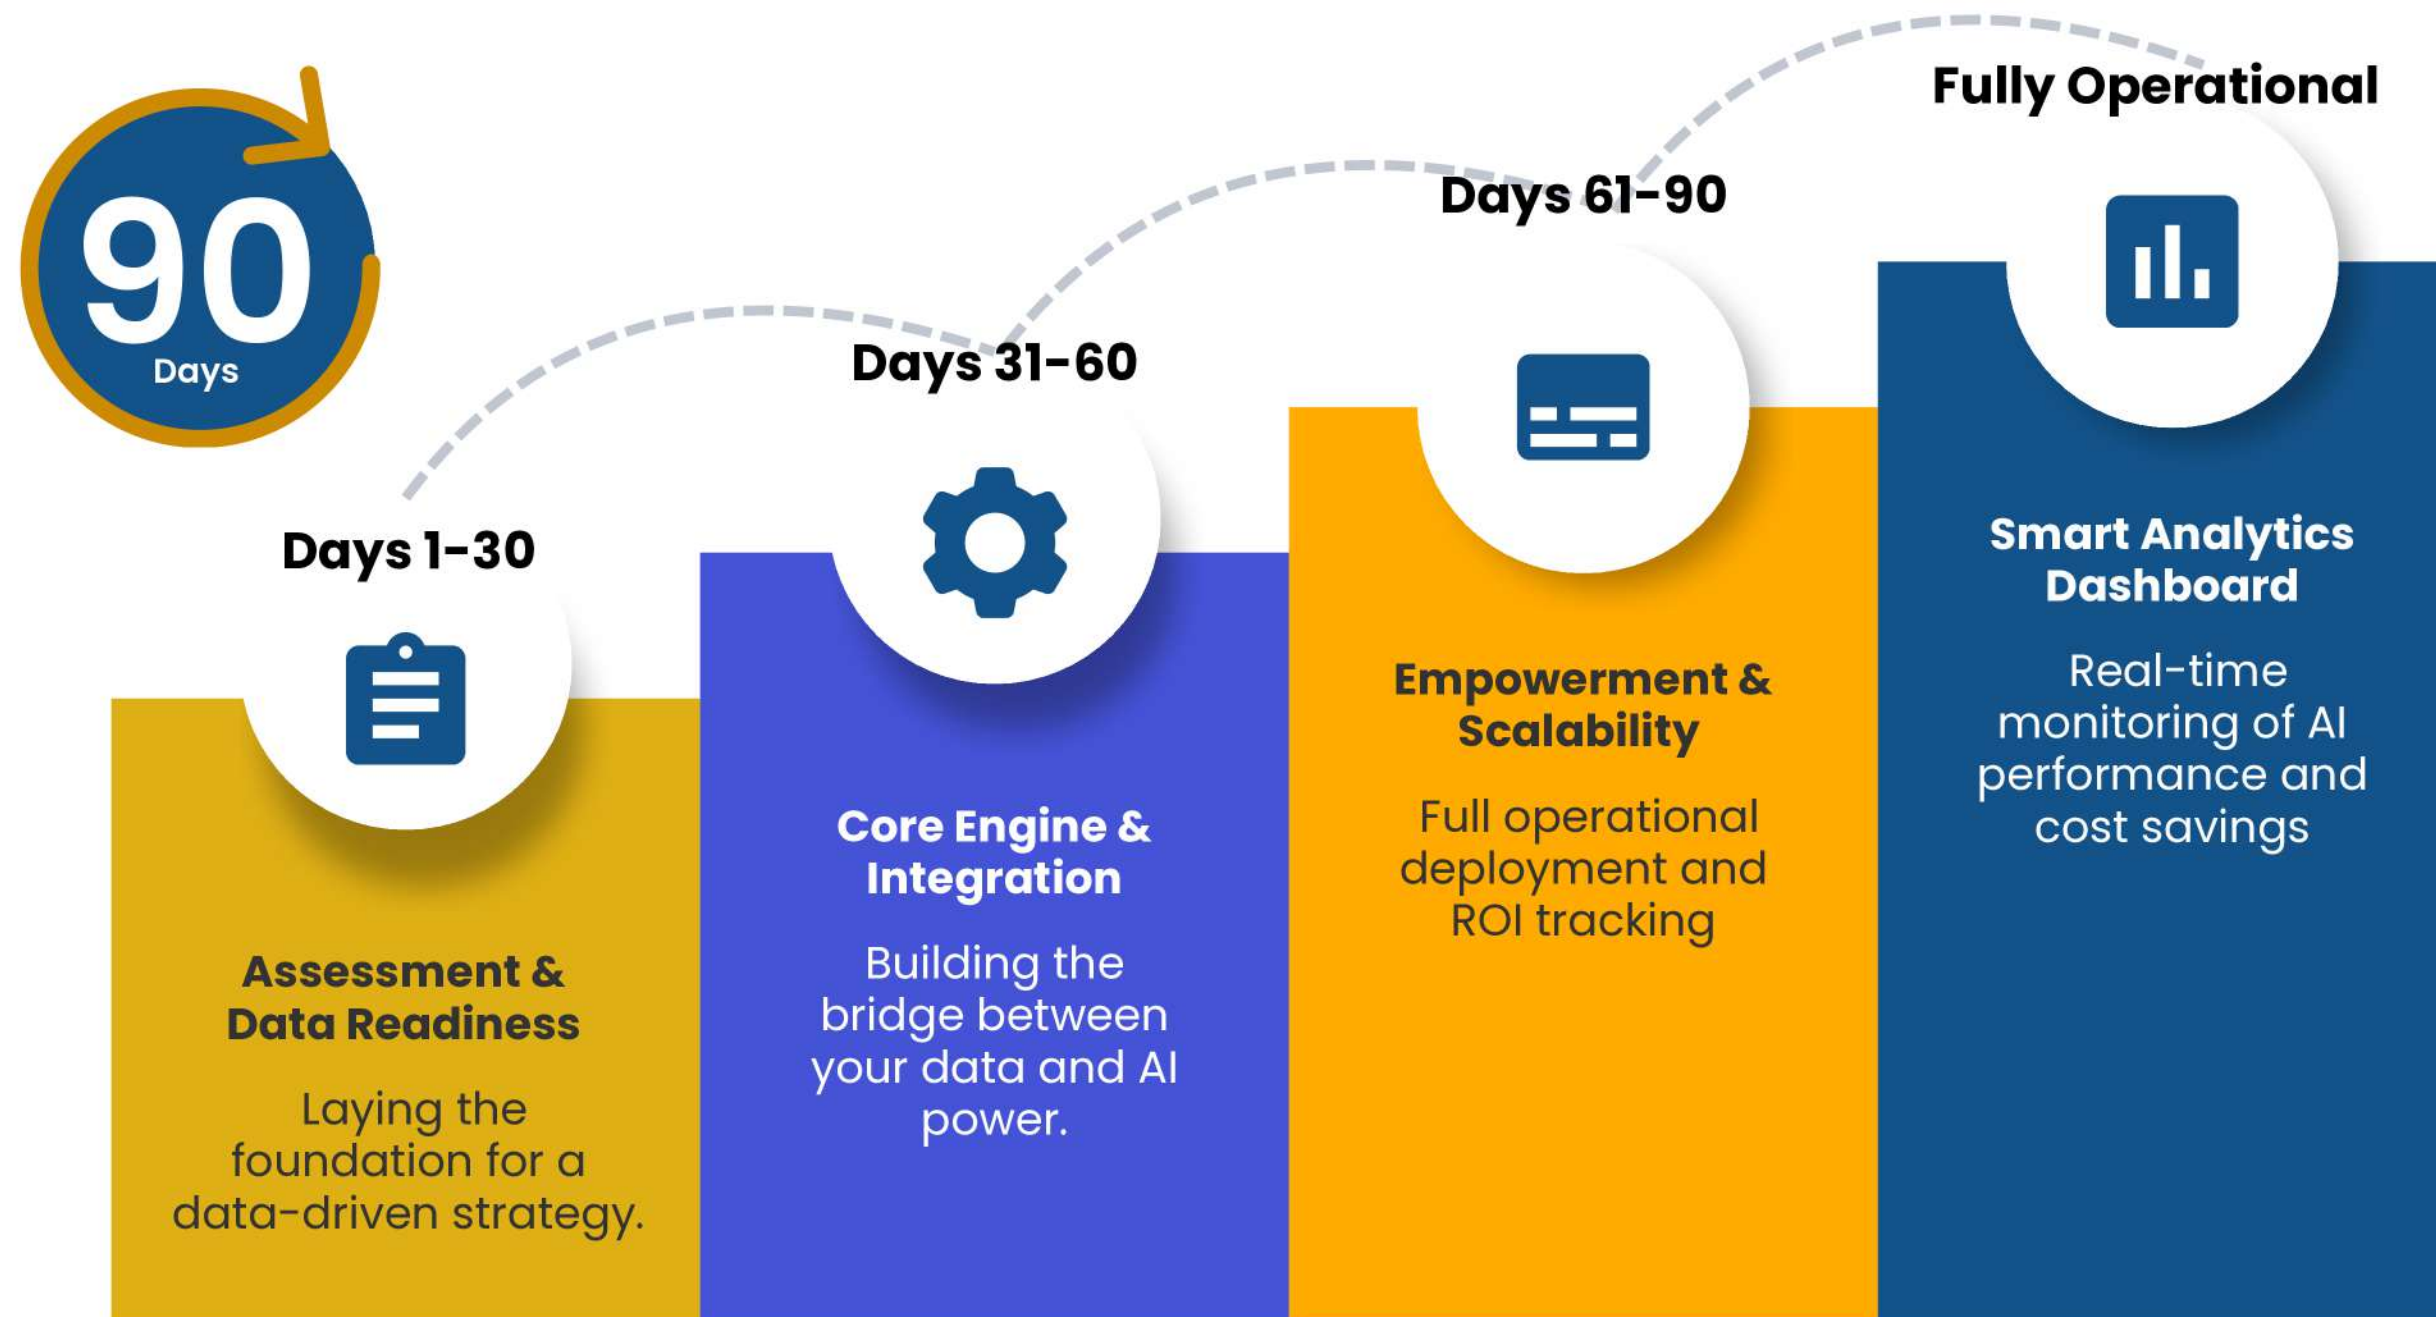

How does Artificial Intelligence (AI) help us stay competitive?

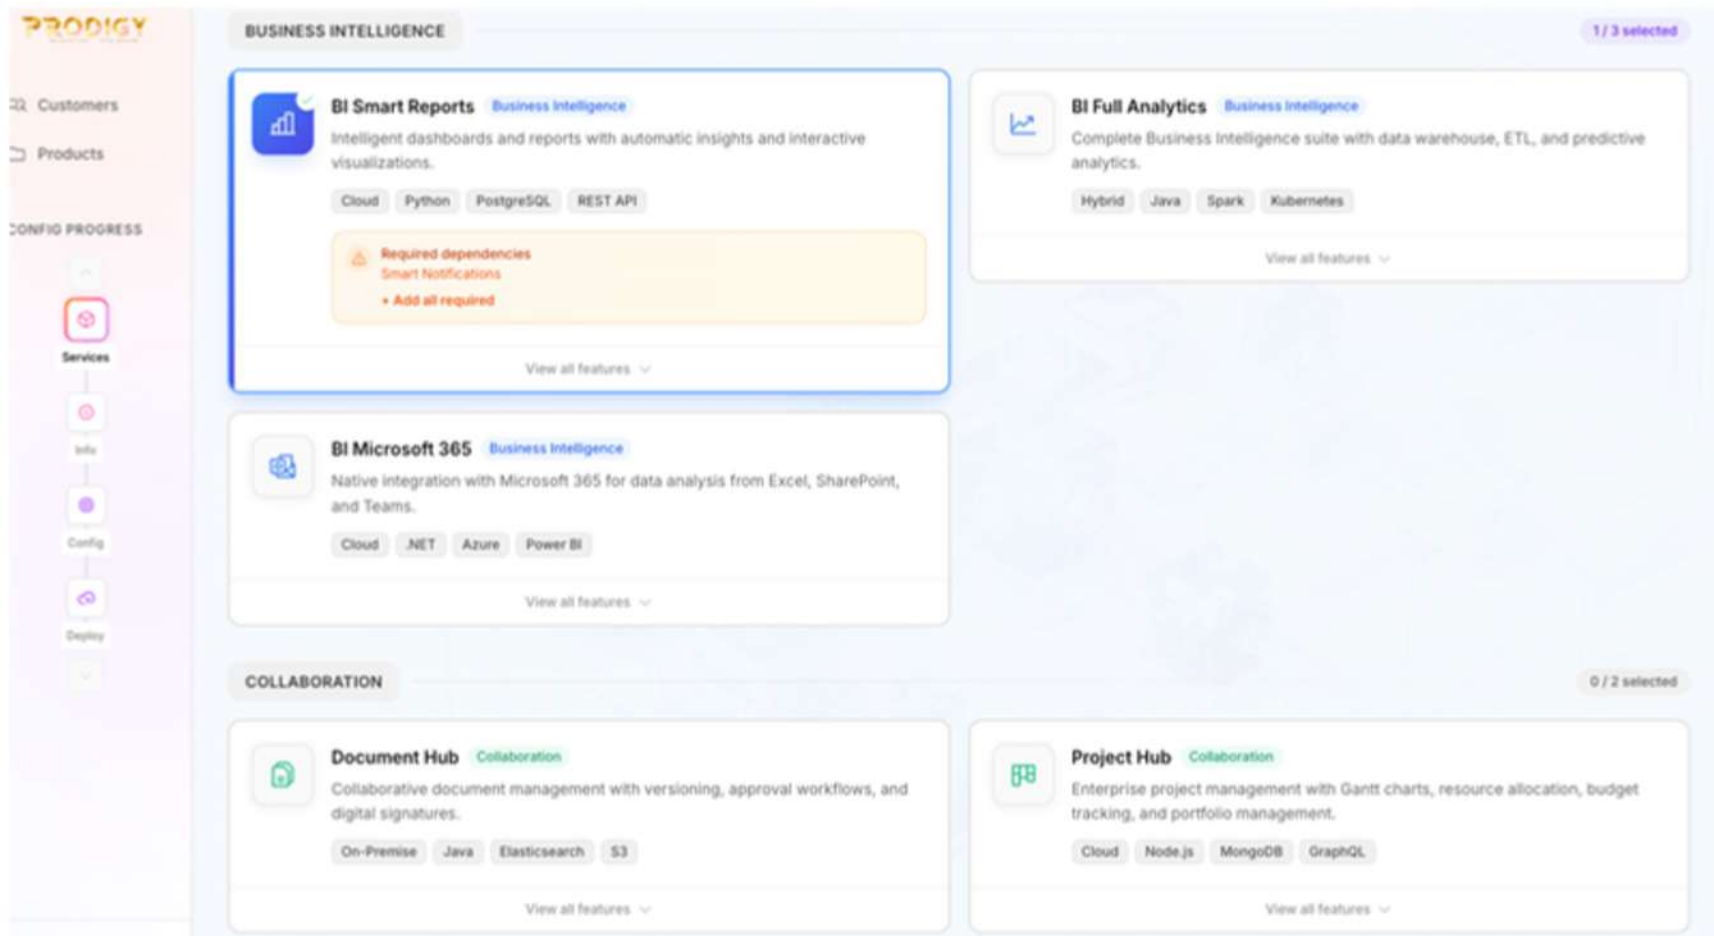

The annual cost of not adopting AI: **€46 billion in lost opportunities.**

The It's Prodigy AI Ecosystem

Seamless AI Integration in **90 Days**

From requirements to production-ready AI platform

AI Process Assessment

Clear identification of which processes are suitable for AI automation, decision support, or optimization.

Multiple Modular Solutions

The platform provides a catalog of modular AI and business services (Analytics, Automation, HR, Sales, Operations).

Service-Based Provisioning

AI and business capabilities are activated as modular services, not developed from scratch.

Governed Delivery Flow

Delivery is no longer a project. It is a controlled, repeatable platform process.

Security & Integration

Innovation that **adapts to you**

DATA SECURITY

We guarantee full compliance through on-premise or dedicated **private cloud** deployment.

ZERO-IMPACT TRANSITION

Eliminate downtime. We match your company's DNA to deliver instant performance with **zero training overhead.**

ZERO SWITCHING COSTS

Zero 'rip and replace' costs. We integrate natively with your current tools to **maximize existing investments.**

Use Cases

Industry
Energy

Client's need

- **Innovative solutions to facilitate support and troubleshooting**, reduce downtime, and minimize physical presence.
- **Real-time monitoring and diagnostics** of equipment, alongside immersive virtual environments for operator training and problem resolution.

Solutions

Creating a Metaverse for immersive training" troubleshooting, improving Enel's operational effectiveness

- Reduces physical presence and downtime
- Risk-free drills and skills development

Key Benefits

Enhanced Efficiency & Quality

- Significant improvements in operational efficiency and safety.
- Decrease in time and errors.

People Development

- Increase in operator competence
- Reduction of downtime

Case Studies

Industry

Manufacturing

Client's need

Gottifredi needed an integrated solution to efficiently manage accounting, warehouse, and production processes. It also required an advanced reporting system to monitor KPIs, analyze operational performance, and support strategic decisions based on up-to-date and reliable data.

Solutions

We implemented Business Central for Gottifredi, customizing it to meet the company's specific needs in terms of accounting, warehouse, and production modules, ensuring integrated and seamless process management. At the same time, we developed an advanced reporting system with interactive dashboards and automated reports, fully integrated with Business Central, to monitor KPIs, margins, operational efficiency, and business trends in real time.

Results

Thanks to the implementation of Business Central and its advanced reporting system, Gottifredi achieved integrated and simplified management of business processes, significantly reducing errors and processing times. Reports and KPIs are now immediately available and up-to-date, enabling faster, data-based decisions.

LUXOTTICA

Client's need

- Robust back-office application for managing receipts from physical stores
- Sort receipts using filters and categorize them
- Advanced performance analytics

Solutions

We developed a custom back-office application for Luxottica. The platform offers comprehensive receipt management functionality, including filters for sorting and categorizing collections such as suppliers, stores, reports, and employees. The application also integrates advanced performance analytics, providing detailed insights into various aspects of store operations.

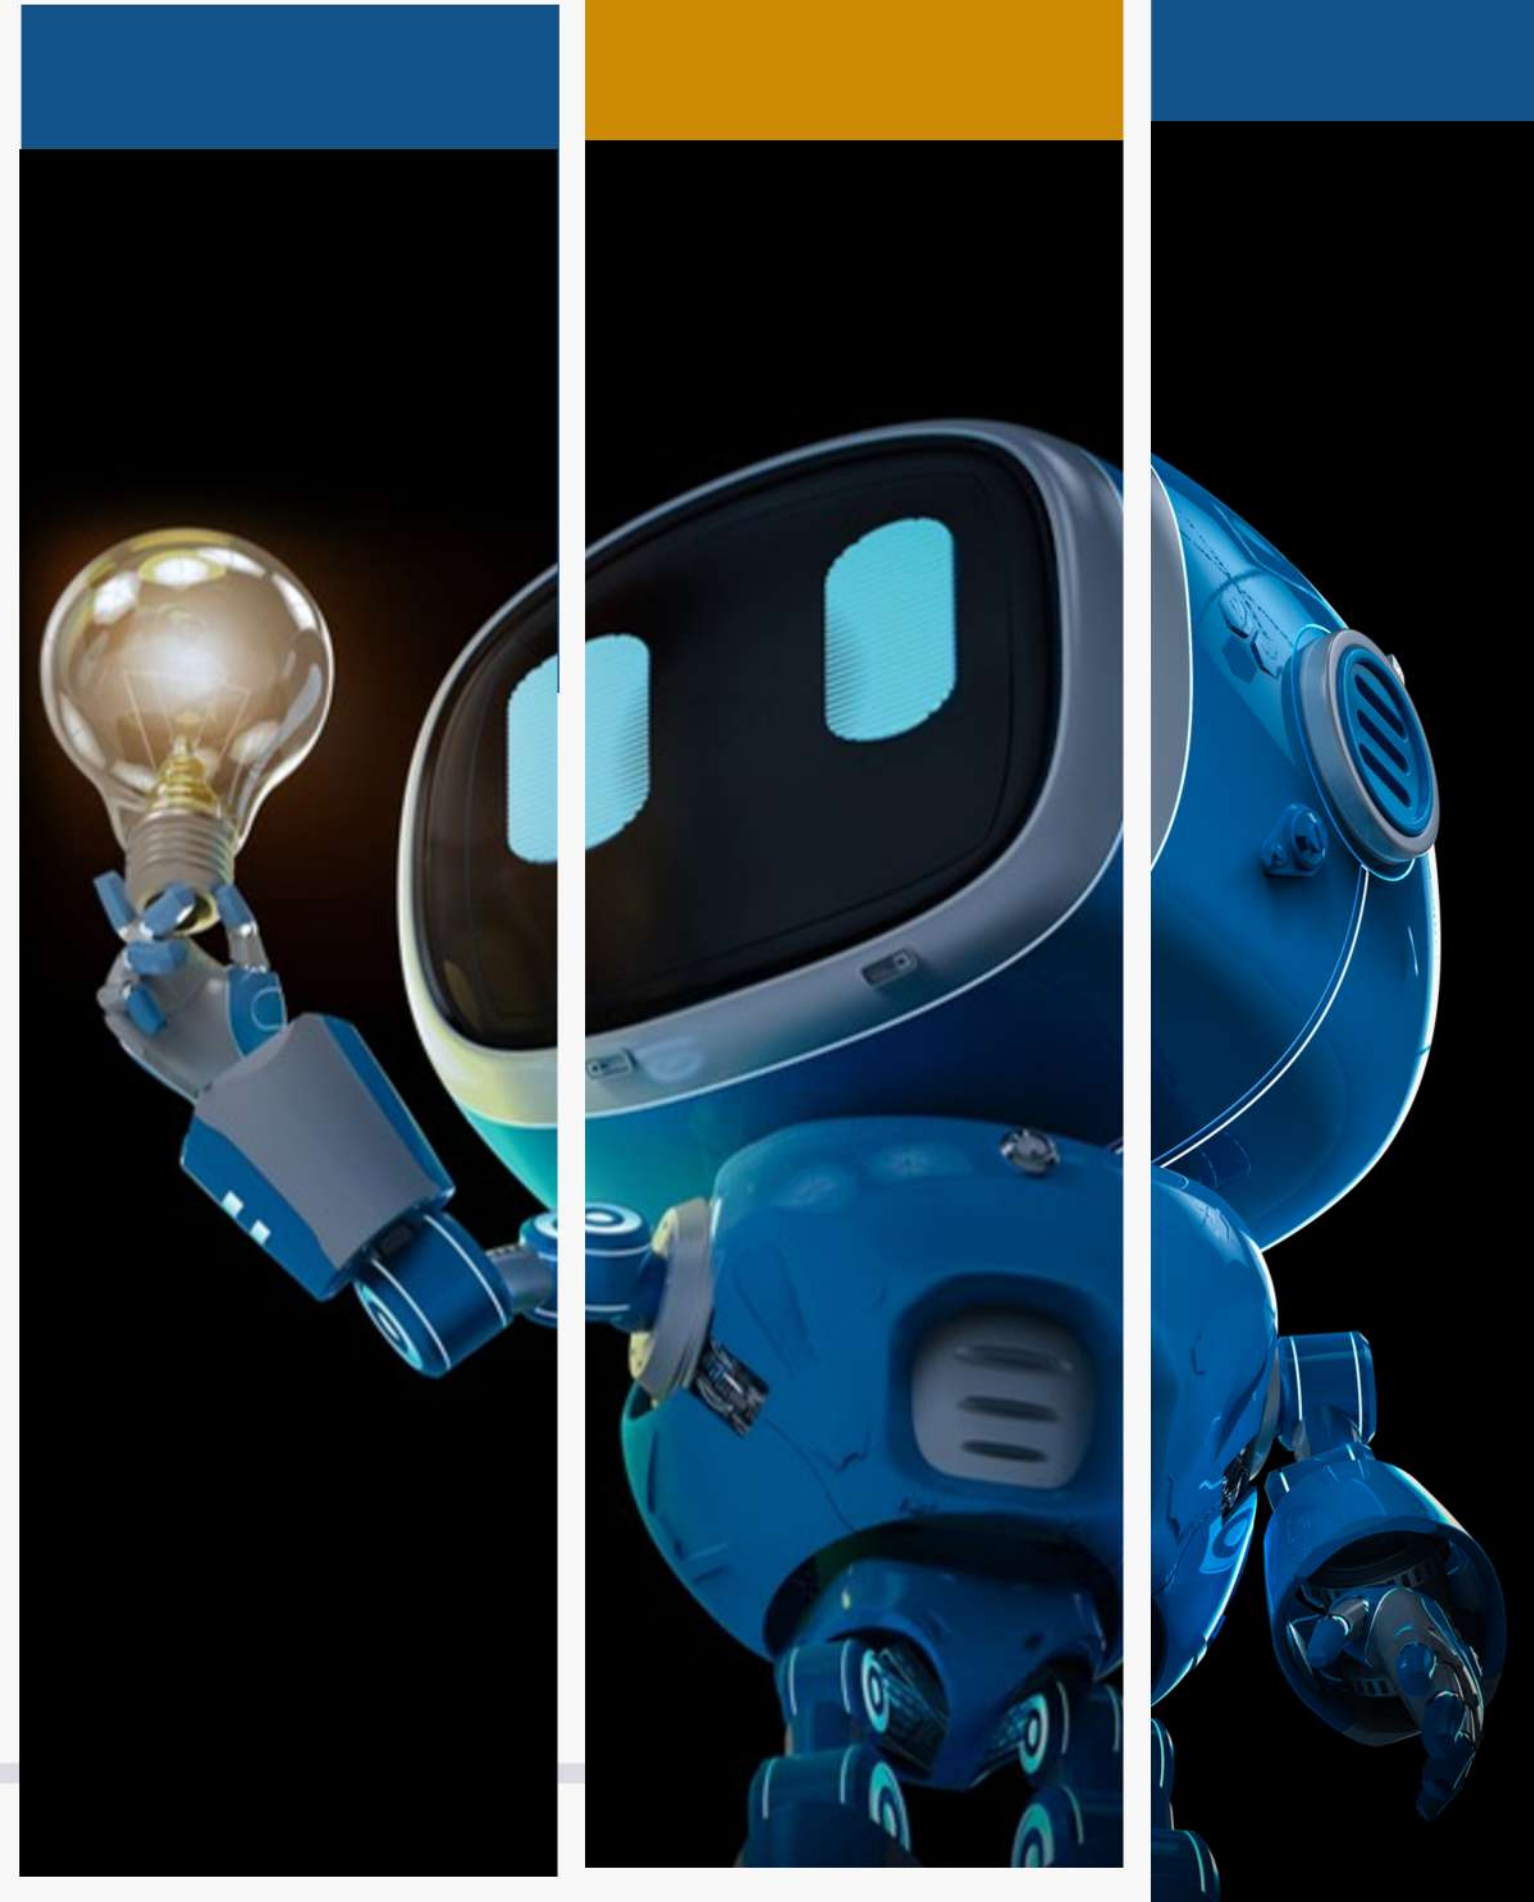

Results

The implementation significantly simplified Luxottica's receipt management process. It improved organizational efficiency by enabling quick sorting and easy categorization of receipts. The advanced performance analytics functionality provided Luxottica with valuable insights, enabling more effective decisions and improved operational performance.

GROWTH

Case 1: Saudi Air Conditioner Industry

Sector:
HVAC

Client's need

Monitor machine downtime and optimize production.

Solution

Implementation of a Business Intelligence platform with artificial intelligence for calculating fault times and automatically generating production reports.

Outcome

Reduce manual daily tasks by up to 40% through automated reporting and proactive fault monitoring.

Case 2: Wholesale Trade

Sector:

INDUSTRIAL

Client's need

Replace generic chatbot solutions with an industry- and department-specific AI system.

Solution

Implementation of a local artificial intelligence, trained with data and knowledge specific to the sector and department.

Outcome

Improve efficiency in customer interactions and optimize internal processes thanks to a more precise and contextualized support system.

Case 3: Corporate Services Company

Client's need

Automate back-office processes and improve communication between departments and customers.

Sector:

MANUFACTURING

Solution

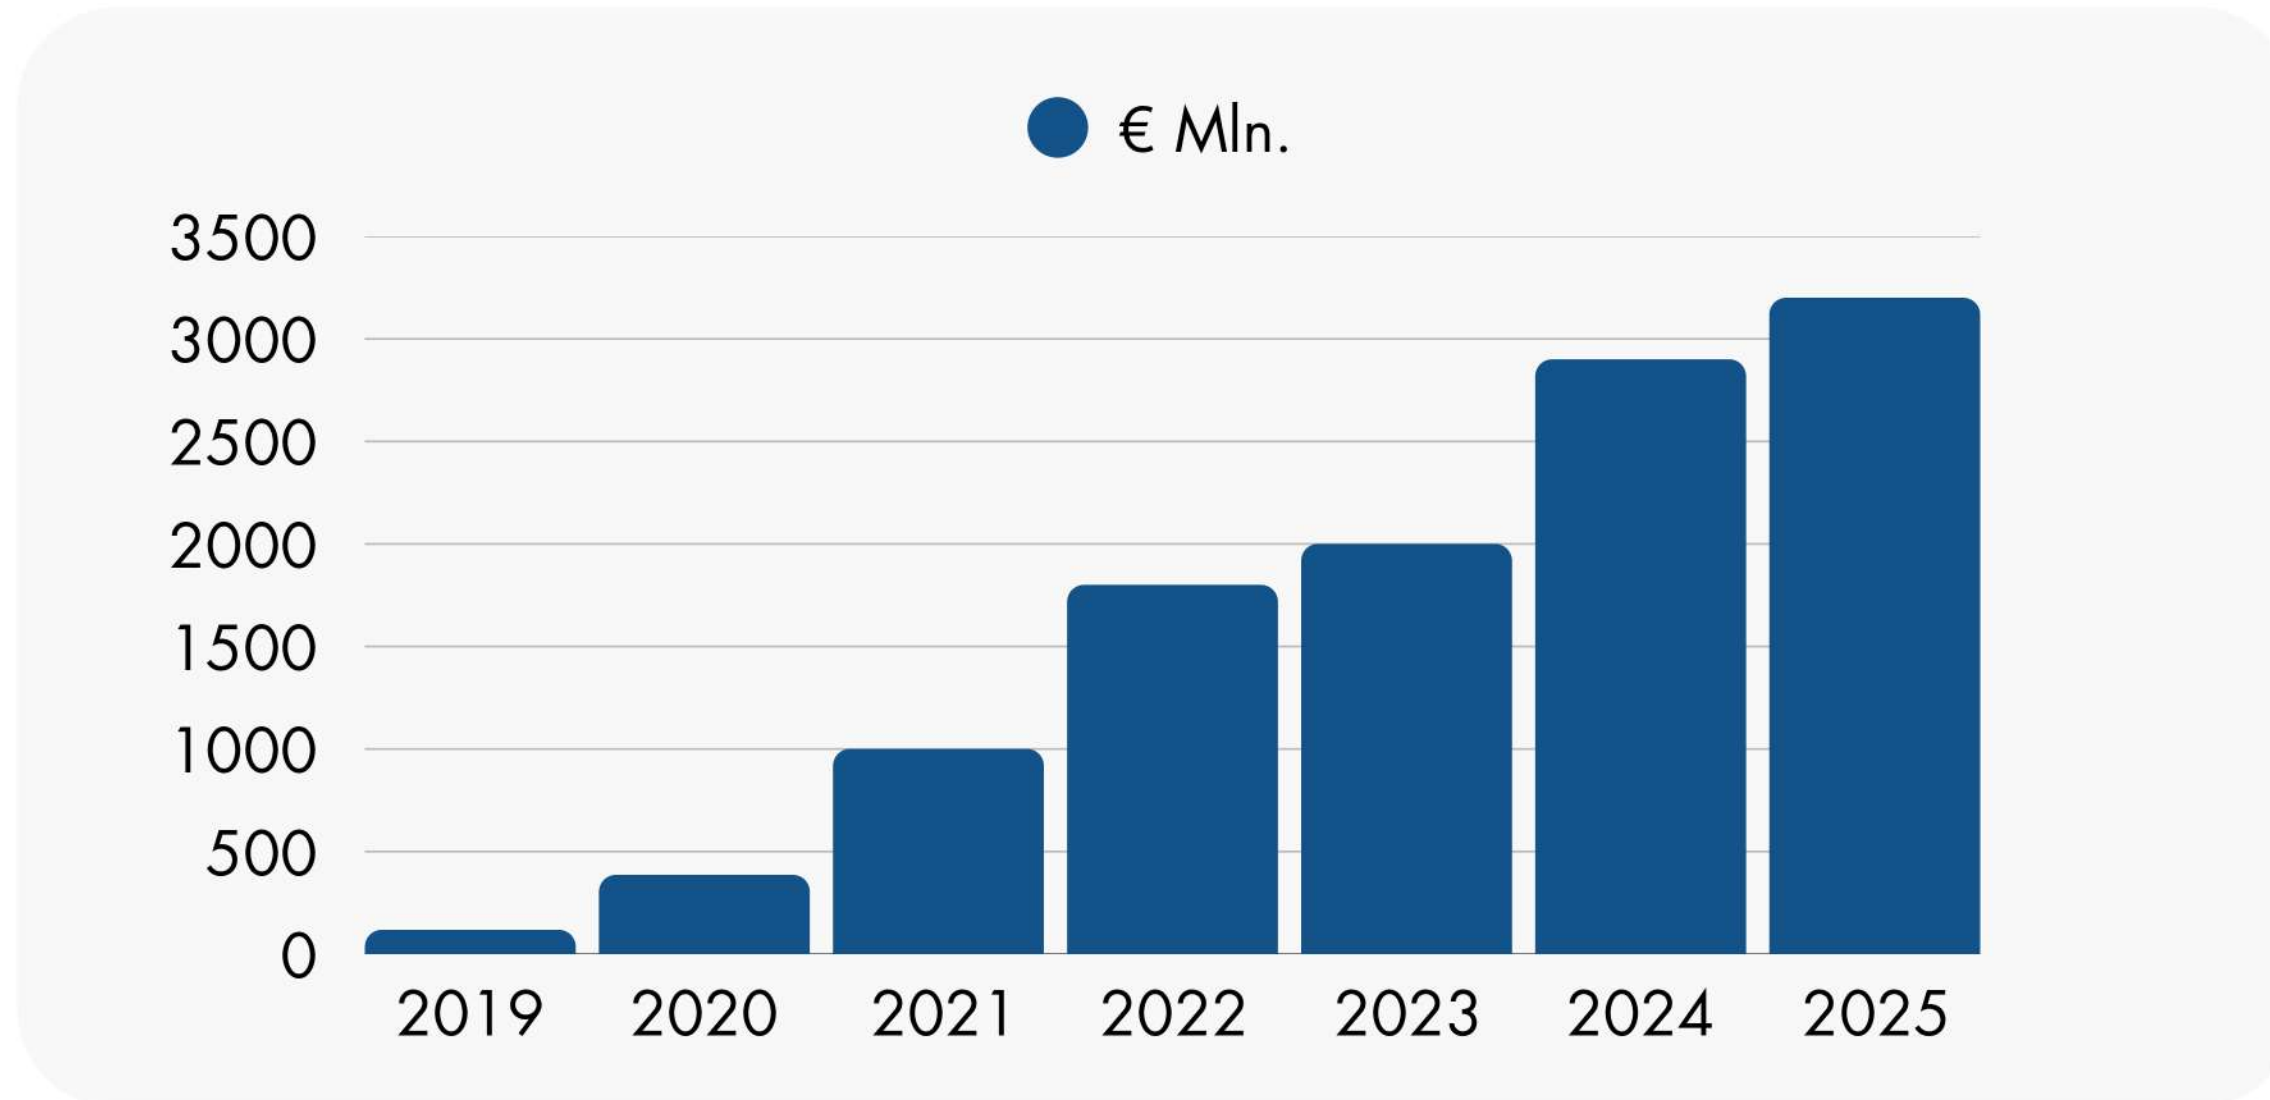

Replacing manual processes with AI-based solutions, automating communication and information management.

Outcome

Streamline workflows, reduce errors, and improve customer satisfaction through faster, more accurate processes.
